THIRD LETTER

TO

THE RIGHT HON. H. LABOUCHERE,

M.P. &c. &c.

BY

C. N. NEWDEGATE, ESQ., M.P.

ON THE BALANCE OF TRADE,

ASCERTAINED

FROM THE MARKET VALUE OF ALL ARTICLES IMPORTED,

AS COMPARED WITH

THE MARKET VALUE OF ALL ARTICLES EXPORTED,

DURING THE FIVE YEARS ENDING JANUARY 1850.

FURTHER TESTED BY REFERENCE TO

THE BALANCE OF TRADE

BETWEEN THE UNITED KINGDOM AND HER COLONIES,

WHICH HAS BEEN SIMILARLY ASCERTAINED.

168874
24/1/22.

SEELEYS, FLEET STREET, AND HANOVER STREET,
HANOVER SQUARE.

Price 2*s.* 6*d.*

PRINTED BY WILLIAM WATTS, CROWN COURT, TEMPLE BAR.

3 Arlington Street,
Jan. 1851.

Dear Sir,

I have continued the system of investigation into the state and results of the external trade of this country during the year 1849, which I have applied to the trade of the four preceding years; and which I have endeavoured to explain in my previous Letters on the Balance of Trade.

The discovery of some omissions in my system of calculation, and the investigation necessary to test their extent, has long delayed my thus addressing you; but in this, as in every other instance where a valid objection to my system of calculation has been urged, measured, and met, I have the satisfaction of knowing that I have advanced another step towards, if I have not, as I have reason to believe, attained my object; namely, the establishment of a system by the assistance of which the actual state of the Balance of Trade (that is, the Balance of the assets and liabilities of this country), which is the result of our external commerce in each year, can be ascertained.

In page ix. of my Second Letter I had taken the following charges as a deduction from the gross value of the Imports due to foreigners :—

Commission	2 per cent.
Delcredere	2 ...
Brokerage	1 ...
Fire Insurance and Dock Charges	1 ...
	6

This account has been proved incorrect, inasmuch as Commission, Delcredere, and Brokerage are charged at 5 per cent.; whereas I have found, on further information derived from high authority, that they do not on the average exceed 3½ per cent. But I had undervalued the landing and dock charges at 1 per cent., whereas, on further inquiry, I find they amount to 2½ per cent. For Insurance

I had made no adequate allowance, and I find that it amounts in the aggregate to 1½ per cent. on the total Imports.

The result, therefore, which I have now arrived at, is,

Commission and Delcredere	2½ per cent.
Dock and Landing charges, &c.....	2½ . .
Brokerage	1 . .
Insurance	1½ .
	7½

I had made a much more serious omission from the value accruing to this country on account of her Exports, because, having calculated the value of these according to the process explained in pages xii. xiii. xiv. and xv. of my Second Letter, I have given only the prime costs of the articles, and have allowed nothing for packing, shipping-charges, or insurance, except that in pages xix. and xx. I allowed for commission and charges 3 per cent. on the three-eighths of the total Exports, effected by foreigners, as expended in this country: I find that I ought to allow, in addition to the prime cost of all articles exported, the following per centages, including the 3 per cent. for which I had made allowance, viz.

Commission, Packing, and Shipping Charges,	3¼ per cent.
Insurance	1 ...
Total	4¼ per cent.

These further deductions from the value paid by this country to foreigners for the Imports, and these additions to the value of the Exports, diminish the aggregate adverse Balance, which would have been shewn as accruing against this country, according to my previous system of calculation, by no less than £14,233,179.*

This diminution of the adverse Balance upon the transactions of the last four years accounts, *pro tanto,* for

* I have not been actuated by a desire to set every undefined item to the credit of my case, but, where in doubt, have left a margin

our having hitherto escaped the necessity of distressing payments in bullion; and I shall subsequently shew, that the existence of an adverse Balance upon the transactions of one, two, or even three years, does not inevitably entail a drain of Bullion, such as to produce the recurrence of a monetary and commercial crisis at any given period. Nevertheless, a monetary and commercial crisis is ever impending so long as the national account is heavily on the wrong side, and will inevitably follow the occurrence of any exciting cause sufficient to interrupt the general tenor of our ordinary trade.

The contrast between the condition of this country, so far as its external trade has been affected by the great change in our commercial policy adopted in 1846, is not at all diminished by the alterations in my system of calculation, which I have just explained. For it is evident that deductions similar to those which I have just allowed from the cost of the Imports, paid to foreigners, and the addi-

against, not in favour of, my own opinion; for instance, I have made no deduction from the freight stated as earned by the shipping of this country, on account of the expenditure necessarily incurred abroad for repairs, refiting, and victualling British ships, nor for the expenditure out of the wages of their crews while waiting for cargoes, or otherwise detained in foreign ports; nor for foreign port charges and commission, paid to foreign agents for procuring freights and advancing funds, these charges and commissions I believe amount to about 7 per cent. on the freights. I cannot at present assign limits to this expenditure in the aggregate, though clearly no gain to this country. I have, therefore, let it stand as part of the freight earned by British shipping, to the credit of this country in full; nor have I in this Letter made any deductions from the charges for insurance on account of the losses which the companies have had to make good in cases of damage, wreck, or total destruction, either of ships or cargoes insured, though these losses ought, as it appears to me, clearly to be deducted from the credit which I have set in full to the account of this country for insurance. These losses I have reason to believe are in cost equal to about two-fifths of the total premiums of the insurance. Here again, however, I am in doubt as to the amount, so have made no deduction.

tions to the value of our articles of Export earned by inhabitants of this country, similar to those I have just made, when taken together, constitute a large deduction from the aggregate Balance when it is adverse, and must be added to the Balance when in favour of this country, as it was previous to the change of policy in 1846. Thus I have given, as the Net Balance in favour of this country on the transactions of 1845, £3,367,795 in my last Balance Sheet, pp. xvi. and xvii. of my Second Letter; but, according to my present mode of calculation, the Balance in favour of this country for that year is shewn to have been £4,797,369, as increased by the allowances and additions to the credit of this country, which I have now made.

I append to this Letter, calculations of the market value of the total Imports and Exports of this country during the year 1849; and, in order to give a more general view of our position during the last five years, have appended a Balance Sheet for that period, which comprises the results of our Trade up to the 5th of January 1850.

This Balance Sheet shews that the Balance of Trade, calculated upon the system I have ultimately adopted, was in favour of this country to the extent of £4,797,369 upon the transactions of the year 1845, which I consider the last of our former commercial system; but that system had been then so greatly modified, as, in the opinion of some persons, not to deserve to be termed Protective. From this opinion I dissent, because I think the fact that the Balance of Trade was at that very period turned against this country, on the transactions of each subsequent year, amounting, in

trate, after making due allowance for all exceptional circumstances, the nature and extent of the change in our commercial policy and position effected in 1846.*

The heavy adverse Balance of £14,165,833, which appears as the result of our total external commerce in 1849, is to my mind as fair a proof of the tendency of the system of Free Imports as can be adduced; and I think those who attempt to argue that our present commercial system has, during the period to which these accounts refer, increased the national capital or wealth, through the operations of our external trade, somewhat bold in their assertions.

Several of those who are most opposed to the conclusions at which I have arrived on this subject, and your Right Honourable colleague, the Chancellor of the Exchequer, in particular, have admitted that I have made fair allowance for the exceptional circumstances which aggravated the adverse Balances in the years 1847 and 1848; I hope not to forfeit their favourable opinion of my candour, but I am not aware of any exceptional circumstance of importance to which any considerable part of the adverse Balance of the year 1849 can be justly attributed. This has been virtually acknowledged. Free Traders of all classes and grades have been loud in their congratulations upon the progress of their great experiment during the first year in which they admit it has had a fair trial. The Free-Trade Press, and

* This fact is analogous to that which is cited by Mr. Alison, to prove the depressing effects of the Currency and Banking Acts, brought into operation in 1819. In his valuable work, "England in 1815 and 1845," (p. 77), Mr. Alison writes . . . "And the declared or money value of Exports, which in 1792 were about ten millions more than the official value, fixed a century before, and continued higher down to 1819, *suddenly turned in that year, and have now come to* be sixty or seventy millions *less than the official value.*"

the Government of which you are a member, have not ceased to proclaim the commercial prosperity which they attribute to the immediate results of their favourite system, or to prophesy their perpetuation.

The Agricultural and several of the interests connected with the internal and with the Colonial Trade have been suffering. Their complaints have been invariably met by answers to the following effect: "The depression of which you complain is as much the immediate and legitimate, and, we hope, transitory effect of the change in the commercial policy of this country, as the general prosperity, at which you would, if not utterly selfish, rejoice:" or, to borrow a metaphor from one who had no small share in effecting this great change, Free Traders seem to say: "We have cut the cords, and the balloon is rising:" why do you not look up?

"Look at the adverse Balance of £14,165,833 which has accrued out of the transactions of our Trade in 1849, to promote which you have sacrificed so much," might form part of the reply which experience will afford in full.

Further investigation has, I hope, enabled me to corroborate the validity of my previous answers (*vide* pages xxiii. xxiv. and xxv. of my Second Letter) to the only specific objection against the conclusions I arrived at in my previous Letters, which seems still to have weight with practical men.

This objection rests on the assertion, that no such adverse Balance as I have shewn could have existed, because none such has been liquidated by the exportation of Bullion; of which the amount of Bullion that has for some time past been in the coffers of the Bank of England is held by my objectors, *per se,* sufficient proof.

It has been argued, also, that for a very considerable period previous to the last three months the state of the exchanges has been so highly favourable to this country,

as to prove, that far from its having been possible that any considerable amount of Bullion has been required to liquidate an adverse Balance of Trade, which, according to the assumption of my opponents, must have been the inevitable consequence of its existence—the exchanges indicated a continual influx of Bullion in this country, enhanced no doubt by the transmission of gold-dust from California, or Bullion which Californian gold has elsewhere supplanted in use.

But let us suppose that this influx of Bullion has taken place, as indicated by the favourable state of exchanges. What has become of the assumed addition to our Bullion?

The amount of Bullion in the coffers of the Bank of England has been comparatively stationary, fluctuating from about fifteen to about sixteen millions, on the average, ever since Midsummer 1848. Has Bullion been elsewhere stored or hoarded in this country? There is no evidence of any such accumulation: if there were, one thing would be evident from it, namely, that the amount of Bullion in the Bank of England is no sure criterion of the amount of Bullion in the country.

But I do not believe, because there is nothing to prove, that the amount of Bullion in the country has increased in any greater proportion than the amount of Bullion in the Bank. On the contrary, I am inclined to believe that a large amount of Bullion has been imported into this country, partly owing to the greater security of this country, as compared with the Continent; and partly owing to the rapid production of gold in California, which has not only increased the amount of Bullion circulating in the world, but has also created a disposition in men's minds to part with it. I am, however, also of opinion that the requirements of the adverse Balance of Trade have, to a certain extent, occasioned the exportation of Bullion; and this accounts for the fact, that although for a lengthened period

the exchanges indicated an influx of Bullion, no considerable increase of the amount held by the Bank of England, or, as I believe, elsewhere in this country, has taken place.

I am inclined to suspect that the amount of Bullion in the country has diminished. Had it been otherwise, why should not an increase have taken place in the amount of Bullion held by the Bank of England, similar to that which. during the same period, has taken place in the Bank of France? The answer is obvious. The Balance of Trade during that period, as indicated by the official accounts of her Imports and Exports, has been in favour of France under her protective system; while the Balance of Trade has been heavily against England under her impoverishing policy of unrestricted Imports. Nevertheless, I do not consider these circumstances sufficient to account for the solvency of this country under such an accumulation of adverse Balance as I have shewn has oppressed her during the last five years.

It is not right to covet our neighbours' goods. I fear jealousy of our neighbours' wisdom is not more justifiable; but I cannot read the Report which the Secretary of the Treasury for the United States, Mr. Corwin, has just issued, without a feeling of something more than regret, that the comprehensive, and, as I think, just view which he takes of national policy, has not some equally able official exponent in this country.

With respect to the revenue and commercial prospects of the Union, commencing his Report with the accounts of the fiscal year ending June 30, 1850, Mr. Corwin writes—

"Our revenue, as already stated, must be mainly de-
"pendent upon duties on Imports. Those Imports from
"abroad can only be paid for by Exports, made up of the
"products of our labour in all its varieties, or in the pre-
"cious metals. If our Imports shall exceed the value of
"our Exports abroad in any given year, to the extent of

" such excess do we create foreign debt? If this opera-
" tion be repeated for only a few years, it is obvious
" that it will effect the withdrawal from us of a quantity
" of the precious metals, equal, or nearly so, to the amount
" of the accumulated debt, bringing with it bankruptcy
" in all departments of business, consequent inability
" to purchase foreign goods, and thus for a time causing
" ruinous depression in the receipts to the Treasury. It
" then becomes equally the duty of Congress, and the
" interests of the people (if possible) so to regulate Im-
" ports, as to confine the importations into this country
" to an amount about equal to such Exports of our own, as
" can find a market at remunerative prices abroad.

" The bare statement of the foregoing well-established
" laws of trade would seem to furnish a safe guide in all
" legislation on the subject.

" Whilst our Importations should be secured, in amount
" sufficient, at a practical rate of duties, to supply the wants
" of the Treasury, such duties should be adjusted in a man-
" ner to affect favourably all industrial pursuits at home.

" If duties on the necessary importation should have
" the effect to impair the ability of the mass of the people
" to purchase and pay for foreign goods, then importations
" to that extent must cease, and, by consequence, the re-
" venue, to an equivalent amount, would be diminished.

" It is believed that our own experience has shewn that
" our Exports cannot be greatly extended, as some people
" supposed, by low duties upon foreign goods in our ports.
" It is a fact, within the observation of all, that merchants
" and ship-owners are ever vigilant and alert, with all the
" knowledge which interest can impart, and all the skill
" which experience can supply, to send abroad any and
" every product of this country which can anywhere find
" a profitable market. These agencies, which are always
" active, extend our Export traffic in all times to the

" utmost limit of advantage to the producer or carrier.
" If, at any time, a given article of Export should be car-
" ried beyond the foreign demand, reduced prices, the
" invariable result of over-supply, brings loss upon all
" concerned. If a foreign article is in like manner forced
" upon our own market beyond the required supply, the
" effect of reduced prices, while it inflicts often ruinous
" losses upon the importer from abroad, is felt by those en-
" gaged in producing the like article at home, in conse-
" quences tenfold more injurious, as the reduction of price
" in our own market extends to, and affects the entire
" labour of, the whole country, which may be employed in
" such manufacture or production. Thus, while the injury
" is temporary and limited in its effect upon the importer,
" it is often lasting and widely extended upon the labour of
" our own people. We see and feel it in the sudden break-
" ing up of establishments, not yet sustained by an amount
" of capital which can afford to encounter temporary sus-
" pension of sales and reduced prices, and not yet worked
" with that skill and economy which long experience can
" alone impart. In such cases labour is suddenly withdrawn
" from a diversity of pursuits, and driven to production in
" a limited sphere. This, again, brings an over-supply of
" whatever may be produced by the common employments;
" while, in the end, it leaves the market of the article, what-
" ever it may be the production of, which has been aban-
" doned at home, at the mercy of the foreign supply alone.

" The result in the end to the consumer is invariably a
" rise in the price of such article; and there being no com-
" petition with the foreign producer, he has possession of
" the market, and of course supplies it at the highest price
" which the demand will give him: prices and profits, un-
" checked by competition, in such cases continue to rise
" with the increased demand and diminished home supply.

" The operation and effect of these laws of labour and trade,

" it is believed, have been frequently and palpably exhibited " in the history of our country. It is from such experience " that the general principles upon which the tariff laws are " based have become the common opinions of the people. . . .

" Our policy should be, by every constitutional means to " encourage the manufacture of our own materials; and, " so far as their product may be necessary for other na- " tions, to exchange them in their most valuable form; for, " under the present system, the gold obtained from our " mines will soon be exhausted in paying for excessive " importations. . . . . .

" During the last fiscal year we imported of foreign " merchandise, including specie, 178,136,318 dollars; and " we exported of domestic products, foreign goods, and " specie, 151,898,720 dollars, leaving a Balance against " us of 26,247,598 dollars.

" A large proportion of the Balance has doubtless been " paid by our domestic stocks, which find a ready sale " at this time in the European markets. These last, how- " ever, as they only postpone a present payment in coin, " cannot be expected to liquidate similar Balances for " coming years, even if it were the wish of the Govern- " ment to create a large foreign debt of this kind. The im- " policy of such a measure will not be questioned, and it " is doubtless the true interest of the country to avoid it.

" In regulating our commerce with foreign nations we " are therefore compelled to take as the true basis of safe " importation from all countries, the amount of our own " products, which we may reasonably calculate may find " a market abroad."

Extracted from the Report of the Secretary of the Treasury, for the United States, dated December 1850, which commences with the accounts of the Receipts and Expenditures of the Year ending June 30, 1850, as given in the " Weekly Herald " of New York, Saturday, Dec. 21, 1850.

Mr. Corwin takes a much more stringent view of the

position which it is practicable and desirable that his country should occupy with respect to the Balance of Trade than I do for this country, when he expresses the opinion that "it becomes equally the duty of Congress and the interest of the people (if possible) so to regulate imports as to confine the importation into this country to an amount about equal to such exports of our own as can find a market at remunerative prices abroad." If this is again accomplished, for it has generally been the case with the United States, nearly the whole of the freight earned by American shipping, all the profit made by her merchants, all the charges expended in the United States, and all the insurance effected by residents upon both the Imports and Exports, go directly and without deduction, diminution, or set-off, to increase the national capital and wealth. I have shewn, by the Balance of 1845, that even when the value of the Imports into this country exceed the value of the Exports by more than one-third, there is a Balance of profit still accruing to this country, amounting to more than £4,000,000, from these items. How large then must have been the Balance accruing to the United States when her Imports and Exports were in value at par. Were this the case with England, then indeed would our external trade be a source of wealth.

But there are circumstances connected with the position of this country, as the mother-country of wide-spread colonies, which render this position neither probable nor absolutely necessary to the welfare of England. It is more necessary to the United States, which have no colonies, than to this country, for our colonies do still pay us rent or tribute, in the form of interest for capital expended in them; and much of this is received in the form of imported produce, part of which is consumed at home, though much of it is exported to realize a return in cash, or as payment for Imports drawn from foreign countries.

The material connection of this country with the colonies, however, and her receipts from them, by way of rent, are annually diminishing under our present policy, till the colonies will soon stand, in a commercial position almost as independent and as little advantageous to us as most foreign countries.

Mr. Corwin's observation upon payment by sale of stocks is very important. He answers an argument I have seen used, namely, that the sale of securities or stock suffice, in lieu of payment in Bullion, to liquidate an adverse Balance. He is perfectly right, according to my humble opinion, in the view he takes of this form of transfer—namely, that it merely delays payment and creates a debt. While the foreigner holds the stock of any country, supposing it to be to any considerable amount, he withdraws from the country an annual or half-yearly payment of interest thereon, and it is in his power to offer his stock for sale, or to realize in Bullion, at periods when the state of internal affairs, of commerce, or of the exchanges, render that operation most embarrassing to the country, the stock of which he holds.

Such considerations have little weight with those to whom all countries are alike; but those who prize the independence of their native land, will think as Mr. Corwin expresses himself on this matter. However I may regret the effect of such a policy as Mr. Corwin advocates upon the relations of this country with the United States—now that our commerce is exposed defenceless to the exactions of foreign tariffs—I cannot help admiring the keen view of the interests of his own country which his Report manifests; and hoping that the evidence it affords, that those who guide the policy of other countries do not think the state of the Balance of Trade, whether adverse or otherwise, beneath their consideration, will aid my attempt to recall your attention, and that of others, to the effect it must have for good or evil on this country.

On re-considering my previous Letters, and the comments upon them which I have met with in the Press and elsewhere, I think I did not lay sufficient stress upon the fact, that whatever portion of the adverse Balance of Trade was due to residents in this country on account of investments of capital, or shares in commercial houses, or undertakings abroad, connected with the Colonial or Foreign Trade of this country, need not have been, and was not, liquidated by the exportation of Bullion during the monetary and commercial cricis of 1847 and 1848, whenever these residents in England found it expedient to set their capital, thus invested abroad, against any liabilities they had incurred on account of Imports from the countries which were the sites of their investments ; nor is it less true, that, in cases where capitalists resident in England had advanced money to merchants resident in the colonies or foreign countries, the cancelling of these credits obviated the necessity for payment in Bullion of any excess in value of the Imports received from such parties, or their correspondents, over and above the Exports sent to them.

This sacrifice of capital invested abroad, and this cancelling of credits or writing off of debts implies, in too many instances, the termination of commercial connections which have formed the principal channels of our trade, the loss of much of the capital formerly invested in it, and owned by Englishmen, and the diversion from it of more. In short, this cancelling is tantamount to the absorption of an amount of capital at least equivalent to the portion of the adverse Balance which it satisfies ; but the loss suffered is generally to a much greater, and much more injurious extent, owing to the circumstances of the period at which such transfers are made.

This process, in short, staves off and estops a drain of Bullion, by intercepting the receipt of payments,

due to this country from abroad, and curtails the means of purchasing, as well as of trade at home, thus aggravating the depression of prices in this country, just as exhaustion staunches the hæmorrhage from many a dangerous wound, by enfeebling the vital power which propels the blood.

In order to elucidate this point, I have sought to obtain some evidence of the extent to which the adverse Balance of Trade may fairly be supposed to have been cancelled, by its being due to residents in this country on account of the Imports consigned to them by their agents or connections in the colonies or foreign countries, trading upon capital furnished them by these residents in this country, who, by setting the value of the Imports they received against their capital thus invested in the colonies or foreign countries, have closed their accounts, instead of exporting merchandize or Bullion in payment for these Imports.

I have before dwelt upon the fact, that capital—no matter where the owner may reside—belongs, for all purposes of improvement and trade, save the interest or owner's profit from it, when he resides elsewhere, to the country in which it is invested (*vide* pages xxi. xxii. and xxiii. of my Second Letter). Nevertheless, such capital can generally be, entirely or in part, recalled and recovered to the country in which the owner of it resides, provided he retains possession of the investment or loan; but if these are sold or cancelled, the prospect of a return, either of rent, interest, profit, or capital, of course ceases.

I have high authority for believing that great part of the Foreign Trade of this country, consisting of Imports as well as Exports, was, previous to 1847 and 1848, based upon capital, owned by residents in this country, though invested abroad; and that, in order to meet their liabilities during that grievous pressure, they were obliged to cancel or alienate their claims to it. To what extent

this was done I have not the means of ascertaining, because residents in England held shares in houses abroad in which their names do not appear. It occurred to me, however, that if our Foreign Trade was thus largely based upon capital owned by residents in England, our Colonial Trade must have been so in a greater proportion, and that it would be easier to ascertain the extent to which this was the case, since many of the circumstances attending the losses suffered by Englishmen connected with the colonies and their trade are well known.

The ordinary mode, indeed, in which West-Indian estates have been alienated appears to have been, that the proprietors, after importing the produce of the last crops, which their estates would produce without further waste of capital upon unprofitable cultivation, gave them up to their agents in payment of the expenses already incurred upon them, or to desolation; and of course these last Imports are uncompensated by Exports, or by payment in Bullion: they closed the connection of these proprietors with their former estates, and swell the adverse Balance, which appears as the result of the trade between the mother country and her colonies. They stand in the account for what they are—bankrupts' debts; and bankrupts do not pay their debts, when due, in Bullion. Their not doing so is proof of the losses they have suffered, whether through their own imprudence, or, as in the present instance, through the sudden depreciation of their property by legislative enactment.

I merely use the case of the West-Indian proprietors as an instance, because the cases of many East-Indian and other colonial houses are analogous; save that, in most instances, the property they abandoned, was in the form of produce or goods, instead of estates; but the form in which the capital was owned and lost makes no difference to my argument.

In short, accounts shewing an adverse Balance of Trade only prove an excess of liabilities. And if it be further shewn that these liabilities have, owing to the force of circumstances or legislation, remained unsatisfied, it is clear that the country against which they stand has been unable to continue her trade in the line, with which they were interwoven ; and has suffered a loss of the means of trade, of credit, and of capital, much greater, probably, than the value of the actual Bullion, by the exportation of which the trade would have been continued.

In order, therefore, to ascertain the position of our Colonial Trade, and the incidence of the Balance accruing from it, whether adverse to this country or otherwise, and to whom the balance was due; I proceeded to get the Colonial Trade separated from the Foreign Trade of this country, so far as the accounts of the quantities of the Imports from, and the Exports to, the colonies have hitherto been supplied by the Board of Trade to Parliament ; and this is only up to the end of 1848.

You will find appended, calculations relating to the market value, the Imports from, and Exports to, the colonies, of the freight, commission, profits, and charges connected with the Colonial Trade, together with a Balance Sheet for the three years 1846, 1847, and 1848, made out upon the same principles as the Balance Sheet of our total external Trade, to which I have previously called your attention. This Balance Sheet shews a Balance against this country and in favour of her Colonies to the extent of £19,538,306 on the trade of those three years.

The ownership of the capital, and the incidence of the losses, connected with the Colonial Trade, whether attaching to residents in this country or to residents in the colonies, were the next points, upon which it was necessary to obtain the most accurate information possible; or, in other words, it was necessary to ascertain, what was the

amount of trade done on account of residents in England, as contradistinguished from that done on account of residents in the colonies. I am deeply indebted to Mr. Blyth, of the firm of Blyth, Green, and Co., whose experience in the colonial trade, and whose high characters are well known, for the following Memorandum :—

MEMORANDUM—The proportions in which the Colonial Trade is carried on for account of the people of this country, and the colonists respectively, is a very interesting question, and, as far as I know, has never before been investigated; nor is it of easy solution, as the inquiry extends over the transactions between this country and our wide-spread colonial and Indian empire. The circumstances connected with the trade of each of the five heads into which Mr. Newdegate has divided the trade being very dissimilar, in the absence of all statistical data, the opinions of merchants engaged in the respective trades are necessarily relied on.

I have resorted to the opinions of those best able to form a correct judgment in those divisions of the Colonial Trade with which I am not personally acquainted, and have availed myself of all other sources of information within reach. The result is the following estimate, in the correctness of which I think considerable reliance may be placed.

8 per cent.

By applying the proportions given in the above Memorandum to the amount of trade done on English, as distinguished from Colonial account, we find that £37,441,945 worth of the value of the aggregate Imports from the colonies, during the three years ending 1848, was done on English account, and that £40,372,575 worth was done on colonial account; while of the Exports, £17,750,036 worth in value was done on English account, and £17,260,110 worth was done on colonial account. If, therefore, we add together the value of the Imports and Exports done on English account in the Colonial Trade, and also add together the value of the Imports and Exports done on colonial account, we have

Thus, it appears that the aggregate of the trade was equally divided between that which is done on English and Colonial account, to within £2,440,704, the amount by which the trade done on colonial exceeds that done on English account; and we may fairly presume that the adverse Balance of Trade accruing in the three years,

and amounting to £19,538,306, has fallen due in the same proportions to residents in England, as contradistinguished from residents in the colonies.

If this assumption is true, and I believe it is, £9,140,555 of the adverse Balance was due to residents in this country, and £9,997,751 to residents in the colonies.

This amount of £9,140,555 of the adverse Balance on our total external trade, which had become due to parties concerned in our Colonial Trade, but who were residents in England during the three years ending 1848, might, as I have endeavoured to explain, have been, and I have every reason to believe, was, accounted for without the exportation of Bullion, though the loss of capital owned by residents in England was none the less absolute.

There is ample reason, also, for believing that the £9,997,751 of adverse Balance, due to residents in the colonies, was never liquidated by the exportation of Bullion; at all events to any thing like its full amount, or even any considerable portion of it, and that the payment of part even was not accomplished in any very limited period. That great part of it has been absolutely lost, no one can doubt who looks at the long list of failures among our colonial mercantile houses, during the period to which these calculations refer. That some part of it is still being repaid by dribblets, out of the wreck of the former means of these insolvent or suspended houses, slowly realized under the hands of the official assignee, or other parties entrusted with the management of the estates, is probable. But the loss to the colonies at the time was absolute, and the liquidation of that portion of the adverse Balance in Bullion was avoided by the mother country; at what cost to the colonies the failure of the East-Indian and West-Indian houses, the paralysis of their trade, the curtailment of their cultivation, and the abandonment of the improvements, amply testify.

I have thus endeavoured to shew how the sacrifice of capital—not strictly English, because not invested in England, though belonging to residents here—met, to a considerable extent, the liabilities which the adverse Balance of Trade upon the transactions of the years 1846, 1847, and 1848, had accumulated against this country, thus obviating the necessity for the exportation of Bullion.

I never entertained the idea that such an excess of liabilities over credits, as I have shewn constituted the adverse Balance, accruing from the aggregate transactions of our external trade during the last five years, either must of necessity, or could, under our present monetary laws, be compensated by a commensurate exportation of Bullion, since neither I nor the commercial public are likely to forget the effect of the diminution of the Bullion in the Bank of England by some eight millions, owing to the exportation of the precious metals in 1847.

The exportation of that amount of Bullion from the coffers of the Bank of England, being equivalent to not quite two-fifths of the net adverse Balance of Trade accruing on the external transactions of that year, occurred at a period when the troubles on the Continent tended to drive Bullion to this country for investment, and acting simultaneously with an enormous sacrifice of capital belonging to residents in England, or invested here, sufficed to tide this country over her then monetary difficulties, without incurring what might be termed a national bankruptcy, or resorting to the suspension of cash payments; the expedient which once saved this country, and which has been of late so successfully adopted, under circumstances of extraordinary embarrassment, by the Bank of France.

Were this country again placed in difficulties, similar or equal to those of 1847, there is no reason for supposing,

that they might not be similarly met, if the patience and available capital of the people of this country were not exhausted. But, after all, a monetary crisis such as we have seen is but a temporary aggravation of the loss of capital our present commercial system is accomplishing; it is but a crisis of the same disease.

I have dwelt upon the chimera, that a heavy adverse Balance of Trade in any one year must necessitate an equivalent exportation of Bullion, because it has been used as a claptrap to delude the public into believing that to be the only legitimate solution of the facts and arguments which I have adduced.

I utterly disown it. What I contend for is, that the existence of a heavy adverse Balance of Trade results, as Adam Smith predicted that such a condition of any country must do, if situated as this country has been, so far as its external trade is concerned, when he wrote—"The expense of society in this case exceeds its revenue, and necessarily encroaches upon its capital: its capital, therefore, must necessarily decay, and, together with it, the exchangeable value of the annual produce of its industry."

The existence of an adverse Balance of Trade tends, no doubt, to the exportation of Bullion, and keeps this danger—for so it is under our present monetary system—perpetually hanging over our heads. But a drain of Bullion may be prevented, as it has on several most disastrous occasions of late years been stopped in mid-current, by an enormous sacrifice of capital. Every one, indeed, who has even a superficial knowledge of the monetary system of this country, must be aware that it is built upon the expectation, fully justified by bitter experience, that a contraction of commercial credit, and a diminution of the supply of money in circulation, will cause a fall of prices,

and that a fall of prices will prevent the exportation of Bullion by rendering the produce of our capital and industry, thus cheapened, more desirable as objects of investment or export than Bullion.

A general fall of prices, however caused in any country, is tantamount to a sacrifice of national capital ; for when the value of the produce of its invested, that is, national capital, falls, the capital itself is depreciated in the same proportion as the exchangeable value of its produce is diminished.

It is no answer to say, that, by improvement of the form or use of the investment, the capital therein invested can be made to produce more in value than it has done, and that so a diminution in the actual value of the capital invested may be obviated.

For, if the improvement in the form or use of the investment be practicable and profitable cotemporaneously with or after the fall in the exchangeable value, that is, the price of the produce, in all probability the improvement was equally practicable, more tempting, and would have proved more advantageous before the produce of the investment was depreciated : and if so, although the adoption of the improvement may prevent an actual fall in the exchangeable value of the investment cotemporaneously with or after the fall in the value of its produce, the fall in the exchangeable value, that is, the price of the produce, will prevent the increase in the value of the investment, which would have resulted from the adoption of the improvement of the form or use of the investment, through the increase or better quality of its produce, had the fall in the exchangeable value, that is, the price thereof, not taken place. In short, it does not matter whether the capital as invested is actually depreciated, or prevented increasing by improvement of the form or use of

the investment: in either case a sacrifice of capital occurs as the result of the fall in the price of the produce.

And this is equally true of a nation's industry as of its capital; for its industry is at once the matrix of its capital, and, in most cases, the means which give it value, by enabling its industrious classes to consume, and thereby creating a demand for, the produce of its invested capital, and of each other's industry.

By the term 'capital,' I mean, not money only, but every form of investment which labour has created and made more or less permanent and available; every instrument of production; every means of sustenance, convenience, and enjoyment—from the princely estate of the richest peer to the spade of the labourer, who drains its broad acres—from the steam-factory of the Manchester millionaire to the lace-cushion of the humblest cotter's wife—from the millions invested in railways to the hawker's basket—from the palace of the Queen to the humblest hut, erected on the waste. By national capital, I mean the aggregate of these, and of all things of like nature to these, that are permanently situate in, attached to, or connected with, this country.

A general fall of prices involves a general diminution of the aggregate exchangeable value of these, and of the labour which created them, and to which they afford means of employment. In particular instances, some of these, and especially the means of enjoyment, may not, or may not seem to be, depreciated simultaneously with, or as the consequence of, the fall of the prices of the rest, or may even increase in comparison of them: but these are exceptional cases; and even these will, in time, fall also in exchangeable value, as the capital which affords the power to enjoy or consume them diminishes.

Money, strictly speaking, such as ours, which is Bullion, or the representative of Bullion, is capital, but not national

capital: it derives its value, not from the industry of any country in particular, or by its connection with any one locality or country; but, as the medium of exchange throughout the world, it has a value everywhere, which varies according to an exactly inverse ratio with the national capital, labour, and produce of the country in which it is used; but when the use of it is recorded, that is, when an account of some purchase or loan, made by it, is kept, that account becomes capital attached to the site where the money is expended, or to the nation or person by whom it is owed, and varies in exchangeable value according to the return from the investment, the interest paid, or the credit of the debtor, whether that be a nation or a person.

The difference between an investment and a debt is this: that, in most cases, a debt is connected with a fixed payment by way of interest, which an investment is not; and although it is national capital, the value of that fixed payment does not vary with the variations in the value of the national capital, that is, its exchangeable value or price of its produce; but, following the rule which regulates the value of money, which is inverse to that which regulates that of all other capital, aggravates every depression of prices, and the sacrifice of capital which that entails upon the country or person, from whom the fixed money-payment is exacted, by entitling the creditor to exact more of the produce of the invested capital or labour of that person or country than the actual fall of prices represents. For instance, if the prices of produce fall one-fourth, the debtor must give one-third more in quantity to make up the sum required by a fixed money-payment, than was required before the fall of prices. In the case, therefore, of such a national debt as this country owes, a portion of which is held by foreigners, it

ought always to be remembered that a fall in the prices to the extent of 25 per cent. sacrifices the national capital, the produce of which is required to meet the payment of interest to the extent of full 33 per cent.; and that if the fall of prices is heavier, still heavier will be the sacrifice of capital, required to meet the fixed money-payment of interest.

We are told by Free-traders, that, in order to foster encouragement and protect our external trade, it is right that the people of this country should submit to a fall of prices, that is, to a sacrifice of national capital, which the system of free Imports has produced. It is clear, then, that the external trade of this country is carried on, not so as to increase, but at the expense of the national capital, unless the extension of our trade compensate for the sacrifice of capital. Mr. Villiers calculated that the fall of prices of agricultural produce alone, which is the result of our present commercial policy, was equal to something like £100,000,000 in the year 1849. If this is true, no one year of the late war sacrificed the national capital to the same extent. But it was argued that this was a mere transfer of capital from the agricultural producer to the manufacturing and other consumers of this country.

Great part of the proceeds of the capital thus sacrificed, which this enormous fall in prices represents, was no doubt transferred from the agricultural body to the manufacturing and other consuming classes of this country by legislative enactment; but no small portion was actually paid to the foreigner by whom this agricultural produce was imported; and the £14,165,833 of adverse Balance on the year shews the extent, to which the loss of national capital, in the aggregate, was absolutely uncompensated by the extension of our Exports.

I think it very important that this should be clearly

understood; for it is the fashion with some parties to declare that the external trade of this country is the principal source of her national wealth. Under a different commercial system, it was a great source of national wealth; but under the present system, our external trade is not a source of national wealth, but it is carried on at a heavy national expense, at the cost of a grievous annual sacrifice of national capital.

Not only is this system expensive, as I have shewn by the absolute loss of capital, belonging to residents in England, though invested elsewhere, and of national capital, properly so termed, which is or has been connected with, or employed in, our external trade; but by rendering our agriculture, and the developement of several of our internal means of production unprofitable, it is cutting up by the root the safest and chief means whence the national sustenance and wealth of this and of every great country has been, and must be, derived. The vast tide of emigration from our shores is evidence of this; a tide carrying with it, not surplus labour only—labour that is surplus because our native field of employment has been swamped by foreign importation; but capital also in the hands of those who have skill to employ it; industrious men, who carry with them capital, who are driven to rend asunder all the ties that bind an Englishman so closely to his home, because the Legislature of England drives them from our farm-steads and markets, for the sake of Foreign Trade and Foreign Capitalists.

You may say the causes of this emigration are, in great measure, an Irish and a social, rather than an English and a commercial, question. I do not deny it. If modern politicians have persuaded themselves that this country can be supported by her external commerce, to the detriment of her agriculture and internal resources—that is, by

maintaining the one at the expense of the other—and frame their whole policy to this notion, in this case the commercial objects of our policy involve and overrule the social. England may be governed by a faction, whose object is personal aggrandisement or wealth, no matter whether gathered with, or torn from the people of the United Kingdom: Ireland may be the victim of her Roman Priesthood, who sanction the ruin of her agriculture and trade, that they may involve in it the Protestant landlords, farmers, and capitalists, who will not bow the knee to their intolerant domination—a Priesthood whose policy seems to be to keep the people poor and ignorant, that they may be to them the more blindly obedient—a Priesthood who do all this with one great object constantly in view, that Ireland may serve as a stepping-stone, whence the tyrant of Romanists throughout the world may set his heel upon Protestant England.

If this is true, and though we may form different estimates of the extent to which it is so, I scarcely think you will deny that such motives have contributed a vast amount of support to the present commercial system, which, if judged simply on its merits, it would not receive: the result is, that our commercial policy is undermining, not only our national wealth, but our social system.

To whatever extent these motives have combined with the anarchical spirit that seeks, in all change, the overthrow of that stability, which has marked the position of England as the great model of social order among the nations of the world, to that extent he who loves his country should distrust the support given to our present commercial system, and, in judging of its consequences, strive to divest it of those gaudy attributes, which, like borrowed plumes, serve to obscure its dark realities.

Remembering all this, the figures I now submit to you confirm my previous impressions. I cannot as yet fully analyse the accounts of last year's trade and its results; but I see no prospect of a change for the better to the extent of £14,000,000, which would bring the Balance to par. There may have been some improvement, but not to any thing like the extent which a hasty glance at the Trade and Navigation Accounts would make the casual observer believe. It is true that the Exports have increased in aggregate value, but the Imports of the raw materials of our manufactures have risen in price, as have many imported articles of general consumption, while British freight has fallen. I know of no reason to expect a permanent continuance of the commercial prosperity which has brightened the aspect of this year. Trade has always had its cycles of prosperity, and I think we have reached the meridian of one.

A fictitious impetus to home consumption, particularly in the metropolis, will probably be given by the vast influx of foreigners expected to attend the Exhibition in Hyde Park: the railroad companies, hotel and lodginghouse-keepers, tradesmen, and caterers of all sorts in London, will reap a harvest in the spring. But that novelty will die out. It may, for a time, divert public attention from the consideration of the general position of the country in its commercial and social aspect; but the day of reckoning must come, and it will then be felt at how vast a cost has been established, and is maintained, a policy which aims at reducing England to the position which Venice once obtained.—Venice, always fictitious as her palaces, built from the first on piles, like youth on crutches. Venice, which never had the germs of greatness and stability within her that England has developed. Venice, with her transient commercial prosperity, with her turbulent mobs

and factious civic aristocracy. Venice, whose lustre was derived rather by comparison with the darkness of surrounding nations in her day, than from intrinsic power, and was never half tested by competition till it faded.

These islands form by nature a peaceful fortress, self supplied with all necessaries: our wide-spread colonies, rightly governed, combine so many climates and resources, that they can supply almost every means, that science, art, or luxury can use or covet.

In fact, the British nation might be independent of the world; and, in case of need, govern the world, because independent of it. But by a wonderful infatuation we are casting all that Providence has placed within our reach aside, for what? Can the answer be believed? To lose capital by an external trade, which, it will be found, we foster for the benefit of foreigners, rather than our own people, taken in the aggregate.

While the spendthrift squanders his capital, all seems bright, and flatterers are not wanting to laud the recklessness, they live by.

Would that some Hogarth were inspired to paint a nation's folly, as he did one man's.

I have the honour to remain, dear Sir,

With every feeling of personal respect,

Your's sincerely,

C. N. NEWDEGATE.

To the Right Honble

HENRY LABOUCHERE.
